

DRY. CLEAN. RELIABLE

Extending Equipment Life Since 1983

40% of a typical maintenance budget can be affected by lubrication-related failures. Des-Case is a global solutions provider whose products extend the life of industrial

lubricants by keeping oil clean and dry from the moment it arrives and is stored at your facility, during transfer and handling, and while in-use on your equipment.

Providing Solutions by Lubricant Stage

Store & Transfer

Filtration, storage and breather technologies are combined to keep your lubricants clean and dry before they enter your equipment.

Monitor & Diagnose

Condition Monitoring solutions provide real-time monitoring of oil degradation and contamination from water and particulate, allowing users to take action based on current or trending oil condition.

Seal & Protect

Desiccant breathers and equipment modifications protect the ingress of dirt and water into your asset.

View & Assess

Many basic lubrication problems can be found by simple visual inspections. Visual Oil Analysis (VOA) products allow quick and easy inspections of oil level, oil quality and whether water is present.

Filter & Purify

Fluid cleanliness is vital to ensuring lubricant quality and optimal reliability in your equipment and plant. Filtration systems are a key step for dry, clean, pure lubrication at the point of arrival and while in use.

Train & Consult

Led by lubrication experts with decades of in-plant and in-field experience, Des-Case offers both consulting services to evaluate and address lubrication issues and training classes to help companies implement a best-in-class lubrication maintenance program.
